**"JnanaSangama", Belgaum -590014, Karnataka.**

**LAB REPORT on**

# BIG DATA ANALYTICS
# (20CS6PEBDA)

***Submitted by***

**ARKA SINHA (1BM19CS024)**

***in partial fulfilment for the award of the degree of***

**BACHELOR OF ENGINEERING**

***in***

**COMPUTER SCIENCE AND ENGINEERING**

**B.M.S. COLLEGE OF ENGINEERING BENGALURU-560019 May-2022 to July-2022**

**(Autonomous Institution under VTU)**

**B. M. S. College of Engineering,**

**Bull Temple Road, Bangalore 560019**

(Affiliated To Visvesvaraya Technological University, Belgaum)

**Department of Computer Science and Engineering**

## CERTIFICATE

This is to certify that the Lab work entitled "**BIG DATA ANALYTICS**" carried out by **Arka Sinha (1BM19CS024),** who is bonafide student of **B. M. S. College of Engineering.** It is in partial fulfillment for the award of **Bachelor of Engineering in Computer Science and Engineering** of the Visvesvaraya Technological University, Belgaum during the year 2022. The Lab report has been approved as it satisfies the academic requirements in respect of Big data analytics - (20CS6PEBDA) work prescribed for the said degree.

Name of the Lab-In charge
ANTARA ROY CHOUDHURY
Designation- Assistant Professor
Department of CSE
BMSCE, Bengaluru

# Index Sheet

| Sl. No. | Experiment Title | Page No. |
|---|---|---|
| 1 | MongoDB- CRUD Demonstration | 5 |
| 2 | Cassandra Lab Program 1: - Student Database | 16 |
| 3 | Cassandra Lab Program 2: - Library Database | 20 |
| 4 | Hadoop Installation | 22 |
| 5 | Hadoop Commands | 23 |
| 6 | Hadoop Programs: Word Count | 26 |
| 7 | Hadoop Programs: Top N | 32 |
| 8 | Hadoop Programs: Average Temperature | 37 |
| 9 | Hadoop Programs: Join | 44 |
| 10 | Scala Programs: Word Count | 53 |
| 11 | Scala Programs: Word Count greater than 4 | 54 |

## Course Outcome

| | |
|---|---|
| CO1 | Apply the concept of NoSQL, Hadoop or Spark for a given task |
| CO2 | Analyze the Big Data and obtain insight using data analytics mechanisms. |
| CO3 | Design and implement Big data applications by applying NoSQL, Hadoop or Spark |

# LAB 1:

## I.CREATE DATABASE IN MONGODB.

**> use arkaDB switched to**

**db arkaDB db;**

arkaDB **show dbs; admin**

**0.000GB config**

**0.000GB local 0.000GB**

## II. CRUD (CREATE, READ, UPDATE, DELETE) OPERATIONS

1. To create a collection by the name “Student”. Let us take a look at the collection list prior to the creation of the new collection “Student”.

**db.createCollection(“Student”); => *sql equivalent***
**CREATE TABLE STUDENT(…);**

**{ "ok" : 1 }** 2.To drop a collection by the

name “Student”.

**db.Student.drop();** 3.Create a collection by the name “Students” and store the following data in it.
**db.Student.insert({_id:1,StudName:"MichelleJacintha",Grade:"VII",Hobbies:"InternetSurfing"});**

WriteResult({ "nInserted" : 1 })

4. Insert the document for “AryanDavid” in to the Students collection only if it does not already exist in the collection. However, if it is already present in the collection, then update the document with new values. (Update his Hobbies from “Skating” to “Chess”. ) Use “Update else insert” (if there is an existing

document, it will attempt to update it, if there is no existing document then it will insert it).

**db.Student.update({_id:3,StudName:"AryanDavid",Grade:"VII"},{$set:{Hobbies:"Skating"}},{upsert:true});**

**WriteResult({ "nMatched" : 0, "nUpserted" : 1, "nModified" : 0, "_id" : 3 })**

5. FIND METHOD

A. To search for documents from the “Students” collection based on certain search criteria.

**db.Student.find({StudName:"AryanDavid"});**
**({cond..},{columns.. column:1, columnname:0} )**

**{ "_id" : 3, "Grade" : "VII", "StudName" : "AryanDavid", "Hobbies" : "Skating" }**

**B.** To display only the StudName and Grade from all the documents of the Students collection. The identifier_id should be suppressed and NOT displayed.
**db.Student.find({},{StudName:1,Grade:1,_id:0});**

**{ "StudName" : "MichelleJacintha", "Grade" : "VII" }**
**{ "Grade" : "VII", "StudName" : "AryanDavid" }**

C. To find those documents where the Grade is set to ‘VII’

**db.Student.find({Grade:{$eq:'VII'}}).pretty();**

**{**
**"_id" : 1,**

```
    "StudName" : "MichelleJacintha",
    "Grade" : "VII",
    "Hobbies" : "InternetSurfing"
}
{
    "_id" : 3,
    "Grade" : "VII",
    "StudName" : "AryanDavid",
    "Hobbies" : "Skating"
}
```

D. To find those documents from the Students collection where the Hobbies is set to either ‘Chess’ or is set to ‘Skating’.

```
db.Student.find({Hobbies :{ $in: ['Chess','Skating']}}).pretty ();
{
    "_id" : 3,
    "Grade" : "VII",
    "StudName" : "AryanDavid",
    "Hobbies" : "Skating"
}
```

E. To find documents from the Students collection where the StudName begins with “M”.

```
db.Student.find({StudName:/^M/}).pretty();

{
    "_id" : 1,
    "StudName" : "MichelleJacintha",
    "Grade" : "VII",
    "Hobbies" : "InternetSurfing"
}
```

F. To find documents from the Students collection where the StudNamehas an “e” in any position.

**db.Student.find({StudName:/e/}).pretty();**

```
{
   "_id" : 1,
   "StudName" : "MichelleJacintha",
   "Grade" : "VII",
   "Hobbies" : "InternetSurfing"
}
```

G. To find the number of documents in the Students collection.

**db.Student.count();** 2

H. To sort the documents from the Students collection in the descending order of StudName.

**db.Student.find().sort({StudName:-1}).pretty();**

```
{
   "_id" : 1,
   "StudName" : "MichelleJacintha",
   "Grade" : "VII",
   "Hobbies" : "InternetSurfing"

}
{
   "_id" : 3,
   "Grade" : "VII",
   "StudName" : "AryanDavid",
   "Hobbies" : "Skating"
}
```

## III. Import data from a CSV file

Given a CSV file “sample.txt” in the D:drive, import the file into the MongoDB collection, “SampleJSON”. The collection is in the database “test”.

**mongoimport --db Student --collection airlines --type csv –headerline --file /home/hduser/Desktop/airline.csv**

## IV. Export data to a CSV file

This command used at the command prompt exports MongoDB JSON documents from “Customers” collection in the “test” database into a CSV file “Output.txt” in the D:drive.

**mongoexport --host localhost --db Student --collection airlines --csv --out /home/hduser/Desktop/output.txt –fields “Year”,”Quarter”**

## V. Save Method :

**Save() method will insert a new document, if the document with the _id does not exist. If it exists it will replace the exisiting document.**

```
db.Student.save({StudName:”Vamsi”, Grade:”VI”})
WriteResult({ "nInserted" : 1 })
```

## VI. Add a new field to existing Document:

```
db.Student.update({_id:ObjectId("625695cc7d129fb98b44c8a1")},
{$set:{Location:"Network"}})

WriteResult({ "nMatched" : 1, "nUpserted" : 0, "nModified" : 1 })
```

**VII. Remove the field in an existing Document**

```
db.Student.update({_id:ObjectId("625695cc7d129fb98b44c8a1
")},
{$unset:{Location:”Network”}})
```

```
WriteResult({ "nMatched" : 1, "nUpserted" : 0, "nModified" : 1 })
```

**VIII. Finding Document based on search criteria suppressing few fields**

```
db.Student.find({_id:1},{StudName:1,Grade:1,_id:0});
```

```
{ "StudName" : "MichelleJacintha", "Grade" : "VII" }
```

**To find those documents where the Grade is not set to ‘VII’**

```
db.Student.find({Grade:{$ne:'VII'}}).pretty();
```

```
{
    "_id" : ObjectId("625695cc7d129fb98b44c8a1"),
    "StudName" : "Vamsi",
    "Grade" : "VI"
}
```

**To find documents from the Students collection where the StudName ends with s.**

```
db.Student.find({StudName:/s$/}).pretty();
```

```
{
    "_id" : 1,
```

```
    "StudName" : "MichelleJacintha",
    "Grade" : "VII",
    "Hobbies" : "InternetSurfing"
}
```

**IX. to set a particular field value to NULL**

```
db.Student.update({_id:3},{$set:{Location:null}})
```

```
WriteResult({ "nMatched" : 1, "nUpserted" : 0, "nModified" : 1 })
```

**X. Count the number of documents in Student Collections**

```
db.Student.count()
```

```
3
```

**XI. Count the number of documents in Student Collections with grade :VII**

```
db.Student.count({Grade:"VII"
}) 2 retrieve first 3
documents

db.Student.find({Grade:"VII"}).limit(1).pretty();

{
 "_id" : 1,
 "StudName" : "MichelleJacintha",
 "Grade" : "VII",
 "Hobbies" : "InternetSurfing"
```

}

**Sort the document in Ascending order**

db.Student.find().sort({StudName:1}).pretty();

{
"_id" : 3,
"Grade" : "VII",
"StudName" : "AryanDavid",
"Hobbies" : "Skating",
"Location" : null
}
{
"_id" : 1,
"StudName" : "MichelleJacintha",
"Grade" : "VII",
"Hobbies" : "InternetSurfing"
}
{
"_id" : ObjectId("625695cc7d129fb98b44c8a1"),
"StudName" : "Vamsi",
"Grade" : "VI"
}

**Note: for desending order :**
db.Students.find().sort({StudName:-1}).pretty();

**to Skip the 1st two documents from the Students Collections**

db.Student.find().skip(2).pretty()

{

```
    "_id" : ObjectId("625695cc7d129fb98b44c8a1"),
    "StudName" : "Vamsi",
    "Grade" : "VI"
}
```

**XII.** Create a collection by name “food” and add to each document add a “fruits” array

```
db.food.insert( { _id:1, fruits:['grapes','mango','apple'] } )
db.food.insert( { _id:2, fruits:['grapes','mango','cherry'] } )
db.food.insert( { _id:3, fruits:['banana','mango'] } )
```

```
{ "_id" : 1, "fruits" : [ "grapes", "mango", "apple" ] }
{ "_id" : 2, "fruits" : [ "grapes", "mango", "cherry" ] }
{ "_id" : 3, "fruits" : [ "banana", "mango" ] }
```

**To find those documents from the “food” collection which has the “fruits array” constitute of “grapes”, “mango” and “apple”.**

```
db.food.find ( {fruits: ['grapes','mango','apple'] } ). pretty();
```

```
{ "_id" : 1, "fruits" : [ "grapes", "mango", "apple" ] }
```

**To find in “fruits” array having “mango” in the first index position.**

```
db.food.find ( {“fruits.1":grapes'} )
```

**To find those documents from the “food” collection where the size of the array is two.**

```
db.food.find ( {“fruits”: {$size:2}} )
```

{ "_id" : 3, "fruits" : [ "banana", "mango" ] }

**To find the document with a particular id and display the first two elements from the array “fruits”**

db.food.find({_id:1},{“fruits”:{$slice:2}})

{ "_id" : 1, "fruits" : [ "grapes", "mango" ] }

**To find all the documets from the food collection which have elements mango and grapes in the array “fruits”**

db.food.find({fruits:{$all:[“mango”,”grapes”]}})

{ "_id" : 1, "fruits" : [ "grapes", "mango", "apple" ] }
{ "_id" : 2, "fruits" : [ "grapes", "mango", "cherry" ] }

**update on Array: using particular id replace the element present in the 1st index position of the fruits array with apple**

db.food.update({_id:3},{$set:{'fruits.1':'apple'}})

WriteResult({ "nMatched" : 1, "nUpserted" : 0, "nModified" : 1 }) insert new key value pairs in the fruits array

db.food.update({_id:2},{$push:{price:{grapes:80,mango:200,cherry:100}}})

{ "_id" : 1, "fruits" : [ "grapes", "mango", "apple" ] }
{ "_id" : 2, "fruits" : [ "grapes", "mango", "cherry" ], "price" : [ { "grapes" : 80, "mango" : 200, "cherry" : 100 } ] }
{ "_id" : 3, "fruits" : [ "banana", "apple" ] }

Note: perform query operations using - pop, addToSet, pullAll and pull

# LAB 2:

Perform the following DB operations using Cassandra.

1. Create a key space by name Employee

```
create keyspace "Employee" with replication =
{'class':'SimpleStrategy','replication_factor':1};
cqlsh> use Employee;
```

2. Create a column family by name Employee-Info with attributes Emp_Id Primary Key, Emp_Name, Designation, Date_of_Joining,
Salary, Dept_Name

```
create table Employee_Info(Emp_id int PRIMARY
KEY,Emp_name text,Date_of_Joining timestamp,Salary
float,Dept_Name text) ;
```

3. Insert the values into the table in batch

```
cqlsh:employee> begin batch
        ... insert into
Employee_Info(Emp_id,Emp_name,Date_of_Joining,Salary,
Dept_N ame) values(1,'Khushil','2021-04-23',50000,'CSE')
        ... insert into
Employee_Info(Emp_id,Emp_name,Date_of_Joining,Salary,
Dept_N ame) values(2,'Tarun','2020-06-21',10000,'ISE')
        ... insert into
Employee_Info(Emp_id,Emp_name,Date_of_Joining,Salary,
Dept_N ame) values(3,'Suresh','2011-02-12',30000,'ECE')
        ... insert into
Employee_Info(Emp_id,Emp_name,Date_of_Joining,Salary,Dept_N
ame) values(4,'Yuresh','2015-09-02',90000,'EEE')
        ... insert into
Employee_Info(Emp_id,Emp_name,Date_of_Joining,Salary,
Dept_N ame)
values(5,'Dharmesh','2016-01-09',70000,'CSE')
        ... apply batch;
```

```
cqlsh> create keyspace Employee with replication = {'class':'SimpleStrategy'
,'replication_factor':1};
cqlsh> use Employee
   ... ;
cqlsh:employee> create table Employee_Info(Emp_id int PRIMARY KEY,Emp_name t
ext,Date_of_Joining timestamp,Salary float,Dept_Name text);
cqlsh:employee> begin batch
            ... insert into Employee_Info(Emp_id,Emp_name,Date_of_Joining,Sa
lary,Dept_Name) values(1,'Nithin','2021-04-23',50000,'CSE')
            ...  insert into Employee_Info(Emp_id,Emp_name,Date_of_Joining,S
alary,Dept_Name) values(2,'Tarun','2020-06-21',10000,'ISE')
            ...  insert into Employee_Info(Emp_id,Emp_name,Date_of_Joining,S
alary,Dept_Name) values(3,'Suresh','2011-02-12',30000,'ECE')
            ...  insert into Employee_Info(Emp_id,Emp_name,Date_of_Joining,S
alary,Dept_Name) values(4,'Yuresh','2015-09-02',90000,'EEE')
            ...  insert into Employee_Info(Emp_id,Emp_name,Date_of_Joining,S
alary,Dept_Name) values(5,'Dharmesh','2016-01-09',70000,'CSE')
            ... apply batch;
cqlsh:employee> select * from Employee_info;

 emp_id | date_of_joining                 | dept_name | emp_name | salary
--------+---------------------------------+-----------+----------+--------
      5 | 2016-01-09 00:00:00.000000+0000 |       CSE | Dharmesh |  70000

## LAB 3:

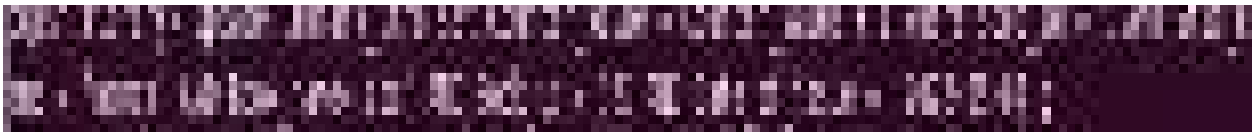
1. Create a key space by name Library

```
cqlsh> create keyspace Library WITH REPLICATION = {'class' : 'SimpleStrategy','replication_factor' :
1};
cqlsh> use Library;
```

2. Create a column family by name Library-Info with attributes Stud_Id Primary Key, Counter_value of type Counter,

```
cqlsh:library> create table Library_Info(Stud_Id int,Counter_value counter,Stud_Name varchar,Book_nam
e varchar,Book_Id int,Date_of_Issue date,primary key(Stud_Id,Stud_name,Book_name,Book_Id,Date_of_Issu
e));
```

3. Insert the values into the table in batch



4. Display the details of the table created and increase the value of the counter

```
cqlsh:library> update library_info set Counter_value = Counter_value + 1 where Stud_Id = 1 AND Stud_n
ame = 'naman' AND Book_name='abc' AND Book_Id = 123 AND Date_of_Issue = '2022-05-04';
cqlsh:library> select * from Library_Info;

 stud_id | stud_name | book_name | book_id | date_of_issue | counter_value
---------+-----------+-----------+---------+---------------+---------------
       1 |     naman |       abc |     123 |    2022-05-04 |             2
```

5. Write a query to show that a student with id 112 has taken a book “BDA” 2 times.

```
cqlsh:library> select counter_value as borrow_count from library_info where stud_id=1 AND book_id=123
;

 borrow_count
--------------
            2
```

6. Export the created column to a csv file

```
cqlsh:library> COPY library.library_info (Stud_Id,Book_Id,Counter_value,Stud_name,Book_name,Date_of_I
ssue) TO '/home/bmsce/CASSANDRA-NAMAN/data.csv' WITH HEADER = TRUE;
Using 11 child processes

Starting copy of library.library_info with columns [stud_id, book_id, counter_value, stud_name, book_
name, date_of_issue].
Processed: 1 rows; Rate:       0 rows/s; Avg. rate:       0 rows/s
1 rows exported to 1 files in 0.176 seconds.
```

7. Import a given csv dataset from local file system into

Cassandra column family

```
cqlsh:library> COPY library.library_info (Stud_Id,Book_Id,Counter_value,Stud_name,Book_name,Date_of_I
ssue) FROM '/home/bmsce/CASSANDRA-NAMAN/data.csv' WITH HEADER = TRUE;
Using 11 child processes

Starting copy of library.library_info with columns [stud_id, book_id, counter_value, stud_name, book_
name, date_of_issue].
Processed: 1 rows; Rate:       2 rows/s; Avg. rate:       3 rows/s
1 rows imported from 1 files in 0.379 seconds (0 skipped).
```

     | print(v)
     | println()
     | }
     | }

scala> for((k,v)<-sorted)
     | {
     | println(k+",")
     | println(v)
     | println()
     | }
im,
2

is,
1

here,
1

there,
1

better,
1

khushil,
1

lets,
1

spark,
1
```
